

# Year 5, Term 1– Living organisms and their

biology

investigation

## Key Vocabulary

### pollinator

Any animals that fertilises plants through pollination.

### classification

How we group living organisms.

### stamen

The male reproductive organ of a flower.

### reproduction

A biological process by which organisms create new versions of itself (offspring).

### ovary

The part of the plant where seeds are formed.

### metamorphosis

A process some animals go through that includes physical change to become adults.

## Sticky Knowledge

Reproduction also helps plants adapt to their environment and contributes to evolution.

All mammals go through 3 stages of life.
